EDUCATION

B.Sc. Comp. science
University of Pune
Oracle OCP 10g 2010

SKILLS

- **Database platform**: Oracle DB (10g–19c), Oracle EBS (11i/R12.x), RMAN, RAC, Data Guard, Cloning, Patching, Upgrade.
- **Bigdata platform**: HDFS, YARN, Ranger, HBase, Kafka, Hive, NiFi.
- **High Availability & Disaster Recovery:** Active Data Guard, RMAN, Data Pump, Flashback, Point-in-Time Recovery (PITR).
- **Automation & Scripting:** Shell & Python scripting, Ansible, CI/CD pipelines, Docker.
- **Application Support**: Oracle APEX, Tableau, Control-M, EBS Sysadmin tasks.
- **Monitoring & Performance Tuning:** AWR, ADDM, Statspack, OEM, SAR, TOP, VMSTAT, Grafana.
- **Cloud & Big Data Exposure:** Azure cloud, Hadoop (big data) ecosystem (CDP, HDP).
- **Governance & Tools:** ITIL-4, ServiceNow, Cloud Cost Optimization.

PROFILE

Oracle DBA, Apps DBA, and Hadoop Administrator with **13+ years of experience** managing Oracle databases, Oracle E-Business Suite, and enterprise Hadoop/CDP platforms. Skilled in RAC, ASM, RMAN, Data Guard, upgrades, patching, performance tuning, and disaster recovery, with additional experience in Azure, Oracle , and Tableau. Automated operations using Python and Ansible, **reducing weekly cloning time by 41% and a Control-M job's execution time by 91%**. Experienced in supporting mission-critical environments for global clients across banking, telecommunications, energy, and manufacturing. Strong analytical, troubleshooting, consulting, and project management skills, with a proven ability to deliver scalable, cost-effective solutions and drive continuous improvement through automation and emerging technologies.

EXPERIENCE

Oracle Apps DBA — Apr 2024 – Present
Diyar United Company | Kuwait

- Adminster multi-node Oracle RAC clusters and Oracle EBS env, executing cloning, patching, and upgrades across dev, test and production env. To ensure system reliability and availability
- Developed a menu-driven workflow for weekly cloning, reducing execution time from approximately 11 hours to 6.5 hours—a 41% reduction—and minimizing manual errors.
- Automated daily health checks and reporting through Python scripting and Ansible playbooks, streamlining operations and reducing manual overhead.
- Tuned long-runing jobs and Control-M workflows to reduce execution time, enhance throughput, and meet business SLAs.
- Created and published Tableau data sources from Oracle and MSSQL, refreshed data extracts to keep reports up to date, and automated monthly log cleanup to maintain reliable Tableau performance.
- Monitored cluster health and resource utilization, proactively finding performance bottlenecks and applying corrective measures to optimize workloads.
- Created and administered Oracle APEX workspaces and users, and automated workspace and application migrations from production to non-production environments.
- Configured Active Data-Guard to meet stringent RPO & RTO targets.
- Performed RCA on recurring incidents, implementing long-term fixes to improve system resilience and reduce downtime.
- Orchestrated containerized database testing environments using Docker and Kubernetes, accelerating release cycles for development and QA teams.
- Coordinated and managed team workflows via ServiceNow, ensureing timely ticket resolutions, SLA compliance, and smooth cross-team collaborations.
- Prepared and delivered monthly system health reports to multiple clients.

LANGUAGES

Hindi	Native
English	Professional

Senior Consultant - DBA — Nov 2019 – Dec 2023
Capgemini | Hyderabad, INDIA

- Managed Hadoop clusters using Kerberos, Apache Ranger, HDFS ACLs, and snapshots to ensure data protection, secure access, and compliance.
- Performed HDP patching, upgrades, and migration to CDP, including node commissioning and decommissioning, capacity planning, and cluster scaling.
- Optimized a Control-M job, reducing execution time from 52 hours to 4.5 hours—a 91% reduction.
- Optimized long-running Hive, Spark, and HBase workloads and Control-M jobs to improve performance and operational reliability.
- Automated code deployments with Ansible and Git, and supported data ingestion, replication, and migration using Apache NiFi.
- Provisioned and managed Azure resources, including Resource Groups, Azure Databricks (ADB), Azure Data Factory (ADF), and Key Vault, with a focus on security, scalability, and cost optimization.
- Monitored and resolved ADF pipeline failures, Integration Runtime (IR) issues, and Azure quota constraints to maintain reliable data processing and operational continuity.

Technical Asociates — Jan 2019 – Aug 2019
HCL Technologies | Hyderabad, INDIA

- Secured Hadoop clusters using Kerberos, Apache Ranger, and ACLs to strengthen authentication and access control.
- Managed cluster upgrades, patching, and data replication to improve platform performance and reliability.
- Commissioned and decommissioned nodes using anisible and applied HDP patches to support cluster scalability and stability.
- Implemented HDFS encryption and snapshots to protect critical data and support recovery.
- Automated the deletion of obsolete Hive tables to reclaim storage and align data retention with business requirements.

Senior Consultant-1 Jun 2013 – Dec 2018
Hitachi Consulting | Hyderabad, INDIA

- Managed Oracle EBS 12.1.x environments, performing cloning, patching, and patch merging to maintain system stability.
- Administered user accounts, responsibilities, menus, and profile options to maintain appropriate access controls and system security.
- Performed complete and incomplete database recovery using RMAN to support disaster recovery readiness.
- Supported Oracle Workflow and Concurrent Manager operations and managed application password resets using FNDCPASS.
- Improved database performance through index rebuilding, table reorganization, and SQL query tuning.
- Used Oracle AD utilities, including adadmin, adctrl, adpatch, adsplice, and ADOP, to perform maintenance, patching, and troubleshooting across EBS 12.1.x and 12.2 environments.

Oracle DBA Nov 2012 – May 2013
Gateway TechnoLabs | Ahmedabad, INDIA

- Managed database users and tablespaces, rebuilt indexes, and reorganized tables to improve performance; generated AWR, ADDM, and Statspack reports to assess system health and support performance tuning.
- Managed RMAN backups, data import/export operations, and schema refreshes to maintain data consistency and availability across environments.
- Conducted pre-patch analysis (PPA) and coordinated client approvals before applying patches.
- Designed and implemented KPI dashboards and automated health check reports to improve monitoring efficiency.
- Gained hands-on experience in automation and system performance monitoring using SAR, top, and vmstat.
